Cuir Gaeilge ar an eolas seo thíos mar gheall ar obair Uisce Éireann. Cuimhnigh go bhfuil an téacs dírithe ar an ngnáthchustaiméir agus gur cheart an leagan Gaeilge a bheith soiléir, sothuigthe. Tá aistriúchán samplach agus tráchttaireacht i [Nótaí ar chleachtadh 17](#). Chomh maith leis sin, féadann tú d'aistriúchán féin a chur i gcomparáid leis an aistriúchán a foilsíodh. Féach [Cleachtadh Eagarthóireachta 19](#).

Water is one of our most valuable resources. It has shaped our landscape, dictated the location of our cities, protected our health and fuelled our economic development.

Improving water conservation

When fitted at your property, your water meter will record how much water has been supplied to your home, allowing you to understand your household's water usage and minimise your impact on the environment.

Working together to ensure sustainable water services into the future

By wasting less, polluting less, reusing more, managing effectively, investing wisely and becoming more efficient in all uses of water – Ireland has the potential to become one of the most water resilient countries in the world. We are at the start of a long journey, and we'll need you to work with us to ensure we have sustainable water services into the future.

To do this we need your participation when it comes to metering, registration, and eventually billing. Together we can improve and secure this precious resource that will be vital to the social and economic life of this nation far into the future.
